The population of chickens distributed by breed and agro-ecological zone (status) A - as shown in Table 1. The number of chicken breeds distributed by zones.AgroecologicalBreed Totalzone (state)SassokurolerShika-FUNAABNoilerFulani BrownAlpha Imo25202520252014402520108012 600Kvbara25202520252014402520108012 600Nasarawa2520252025201440252012 390Ttotal12 60012 600720012 390540062 790During bird distribution, each of the participating smallholder poultry farmers was allocated an average of 30 pre-vaccinated 6-weeks-old growers of any one Of the six races ensuring while all the breeds were represented in each village. World Poultry Science Journal. Fatality, egg production and the weight of the eggs were taken every 2 weeks (14 d) from 22 to 72 weeks. [Google Scholar] Kassambara A, Kosinski, M. Although Kebbi (2972) had a larger total number of birds at 52 weeks compared to IMO (2465), the total number of eggs in 52 weeks was 192 731 higher eggs in IMO Compared to Kebbi. [Google Scholar] Nwosu CC, Asuquo Bo. 2016; 69: 1 permanent "33. However, you have to bring your eggs from an incubator to open up. According to Shitt et al. Nigerian indigenous: a precious genetic resource for the production of meat and eggs. Available on: [Google Scholar] Roy R, Monda T, Moktan MW. A knowledge of the production performance of the States of economic importance is necessary for the formulation of reproduction plans aimed at improving the means of existence of small chicken farmers (Yakubu et al., 2019). The high HDEP in IMO (62.84 %) and rivers (57.40 %), the plain rainforest and the fresh water swamp, respectively, can be attributed to the lowest environment temperatures in the two areas compared to the high environment temperatures in Kwara %, Nasarawa (33.50 %) and Kebbi (41.36 %). Kuroiler (1.48) had the highest cumulative risk' for the probabilities of death in Kwara (Fig. 17). BMC Vet Res. Overall, Kwara had the lowest capacity' (Fig. 16), while Nasarawa had the highest capacity' survival rates for all breeds during deposition. The classification of the breeds (highest to lowest') in terms of growth, egg production and survival was as follows: Shika-Brown/Sasso, FUNAAB Alpha/Noiler, Kuroiler and Fulani. 32:77. Improving backyard poultry production in Africa: Interventions and their economic evaluation: Procedures for a final research coordination meeting organized by the FAO/IAEA Joint Division of Nuclear Techniques in Food and Agriculture; 24AA28 May 2004; Vienna Now you have a relatively large egg, with yellow yoke that is produced in abundance! You also have more nutrients in this yellow yoked egg and as a result, your consumers will pay the price, you slightly higher" than the local egg. I need kuroiler chicks by day, question I need kuroiler chicks by day, when I can get the genuine ones. Imo had the highest probability' survival rate (0.849 AA± 0.004) for all birds, which was closely followed by Nasarawa and Kebbi. Survival and cumulative risk to agroecologists are shown in the figures. 10 and 11. Effect of the breed on survival performance of the females bred in the holding during the laying phase in the ACGG Nigeria project areas (20A + AA472 weeks) (2016A e AA2018).BreedsINFNSprobability survival AA± Cumulative hazard AA± SELog rank (P value)Fulani170112790.75 AA± 0.0140.287 AA± 0.01 43.87 AA 10-35FUNAAB Alpha246417750.716 A ± 0.0130.3 35 Ae 080,725 AmilarA± 0.0090.321 AmilarA± 0.009 Shika-Brown471736930.773 Aelp E± 0.008 Effect of agroecologists on the survival performance of the female birds farm in project areas ACGG Nigeria (22a e a e 70 weeks) (2016's a e a e 70 weeks) (2016's a e a e 70 weeks). Growth phase (6 a e a e 70 weeks) The breed due to environmental interaction on the growth of birds revealed that two races in IMO that survived the best are Shika-brown (90.4%) and Fulani (90.8%) (Table 12). Special question. B. Farmers were pre -conformed before the visits of the earth officers; All birds have been weighed in morning hours after the night fasting with a suspended scale having a sensitivity of 100 g. While the Kuroiler Hen does not sit on its eggs as a e a e committed to laying more eggs, its fertilized eggs usually bring good incubability results compared to the local chicken. Nairobi, Kenya: 2018. At 20 weeks, the breeders were free to slaughter the roosters for the consumption of meat or to sell them for income, while the eggs produced by the hens, in the period of 52 weeks of deposition, served as a source of nourishment and income (Alabi et al., 2020). International Journal of Livestock Production. Do not hesitate to ask our travel consultants. The difference in environmental factors between the five agroecologies was adequate from the CV for each variable. 2000; 29: 129a e a e a "136. [Last accessed: 20 July 2019]. SFR J AN SCI. The values are 809, 1169, 1217, 2219 and 2706 mm, respectively, for Kebbi, Nasarawa, Kwara, imo and spars. Each of the three senatorial districts of each state, two areas of Local Government (LGA) (Six LGA) and two villages for LGA were randomly selected, giving 12 villages by state and 60 villages in all. A companion R to applied regression. Compared to Kuroiler, Noiler and Sasso, the greatest survival of Funaab Alpha, Fulani and Shika-Brown can be attributed to their adaptability to environmental conditions 'Aip 'Aip id otlom odnenrof, evitan itraportnoc orol elled oeroprocc osep led oipoid li acric a onif onnarecerc sreliorUK irtsov I .j8102 .ira e ubukaY(meat .pp. The body weight of the females was not significantly different (p 0.05) in the body weight of the females of Noiler, Kuroiler and Sasso di etA 6 to 18 weeks.The CV in female body weight at 6 weeks of age A FUNAAB Alpha (21.59%), Shika-Brown (11.38%), Fulani (10.44%), Kuroiler (5.16%), Sasso (4.49%) and Noiler (3.77%). As local birds are resistant to the disease, they can be kept in an outdoor/semi-outdoor system, to scratch food on their own. 160 pp. 2015;94:1493AA1498 Noiler males showed superiority in growth from the other five breeds of 6 to 14 weeks, as shown in Table 2. A Cox regression model revealed that Rivers had more' birds at risk of death from 6 to 14 weeks, while between 14 and 18 weeks Kwara had more' birds at risk of death (Fig. 7).Effect of the breed on the overall survival performance of birds on the farm (males and females) during the growth phase in ACG project zones (6AA18 weeks) (2016AA BreedsINFNSprobability survival AA± Cumulative hazard AA± degree SELog (P value)Fulani368232290.844 AA± 0.0070.17 AA± 0.0072.27 AA A A 0.168 Ae 096280,773 Amilar A± 0.005 Shika-Brown11 84 410 2650,827 A± 0.0040.19 A± 0.004 Effects of agroecology on the overall survival of birds (males and females) on the farm during the growing phase in the ACGG Nigeria project areas (6 e18 weeks) weeks) probability SECumulative hazard probability SELog rank (P value) imo10 35 191 830,849 ± 0.0040.164 ± 0.0041.92 ±10-201Kebbi10 43 890 650,824 ± 0.0050.194 ± 0.005 Kwark 10 55 082 530,715 ± A± 0.0060.336 to± 0.006 Nasarawa974 783 990,846 to± 0.0040.167 to± 0.004 Rivers10 14 281 860,754 to± 0.0060,283 0.006 3.6.2. Deposition phase (20A72 weeks) The probability of survival was significantly affected the breed of birds during the laying period (Table 10). However, at 18 weeks of age, Noiler had the highest CV (12.77%) compared to Kuroiler (6.18%) and Sasso (6.93%).Body weight (g) of male birds of the six breeds tested in the ACGG-NG project areas (NG ANigeriaA (6ANNA18 weeks) (2016e2017).AgeBreed (week) NFulaniCVNFUNAAB AlphaCVNKuroilerCVCVCVCVKCollerCVNSsassoCVNShika-BrownCVNMeanCV61 532 303.93 ± 10.878.762 371 442.98 ± 23.45d12.974 603 616.79 ± 16.12b6.44 106 729.77 ± 0.51a3.534 641 565.08 ± 11.23c4.875 600 361.08 ± 16.38e11.1122 853 503.2 7 ± 66.2332.24 101 218 462.56 ± 17.63 342 136 691.07 ± 24.177c8.573 718 838.91 ± 16.46d4.813 251 909.87 ± 16.09a4.333 826 817.37 ± 17.55b5.2 649 165 7.83 ± 14.70d6.9519 065 706.27 ± 74.5025.8 414 140 670.94 ± 23.66d8.641 795 938.17 ± 31.10c8.1 234 001 141.29 ± 2 5.88b5.5 526 761 314.39 ± 52.97a9.8 734 061 019.51 ± 24.29b 5.844 214 728.11 ± 21.59d7.2616 631 968.74 ± 99.8925.2 6 181 016 813.75 ± 29.61d8.9 115 811 202.63 ± 54.27b11.0 526 231 390.82 ± 33.82a5.9 720 381 461.28 ± 63.15a1 0.59 27 781 398 AA± 32.39a5.683 658 978.63 AA± 36.16c9.0513 6 941 169.42 AA± 122.114.63 Bodyweight (g) of females of the six breeds tested in the ACGG-NG project areas (6 A18 weeks) (2016 Ae20 2017).
